*Feeding levels are for guidance purposes only; actual levels should be altered according to condition of your horse along with temperament and level of work. A horse will not manage to eat more than 2kgs in any one meal. If your horse requires more than 4kgs of feed per day, it is important to divide the total amount of feed into as many meals as possible

*Weigh your feed! Guessing how much to feed is a very hit and miss approach and you are likely to end up feeding too much or not enough, weigh how much feed your scoop holds for more accurate feeding

*Avoid feeding within one hour of exercise

*Always ensure there is fresh, clean water available 24 hours a day

*If you are changing your diet then make changes gradually to prevent digestive upset
